

DURAPRO[®]

AC3471

Latex Contact Cement

DURAPRO AC3471 is a water-based adhesive designed for bonding high pressure laminates panels (HPL), polyurethane foam, polystyrene foam and fabrics to wood, plywood or particle board. AC3471 has a long open-time, good contactability under low pressure, excellent green strength, high shear and peel strength, and superior hot creep resistance. Its flowability and high solids content allow to spread easier and to cover up to three times the surface area than a solvent based contact cement.

Available in the following sizes: 950 ml, 3,78 ml and 15L.

DURARO AC3471 complies with new 2024 VOC limits.
